

SCENARIO CONTEXT: SAFARIPAY KENYA LTD.

Company Profile:

SafariPay Kenya Ltd. is a growing mobile money and digital payments company operating in Kenya and Tanzania. Founded in 2020 with headquarters in Nairobi, the company has grown to serve 2.5 million users with 120 employees and 3,000 agent locations. SafariPay processes approximately 500,000 transactions daily, totalling \$5 million. Their IT environment is mixed, comprising Windows 10 desktops, Office 365 in the cloud, and AWS infrastructure. They have a customer mobile app (Android/iOS) and an agent network using Android tablets. The company is subject to the Kenya Data Protection Act 2019 and has a PCI-DSS compliance audit scheduled soon.

Incident Details:

Recently, SafariPay experienced a security incident. On Monday at 9:00 AM, the HR Manager, Jane Mwangi, received an email appearing to be from the Kenya Revenue Authority (KRA) ITAX system with the subject "URGENT: Tax Compliance Verification Required - Action Needed". The email contained a link to a fake Office 365 login page (kra-itax-portal.com). Jane entered her credentials but immediately received a "Server Error" message.

By Tuesday at 3:00 PM, the IT department noticed an unusual login from an IP address in Romania accessing Jane's account. The investigation revealed that the attacker had downloaded 50 employees salary records and accessed a shared HR folder. Additionally, a document containing unencrypted agent network credentials were accessed. The incident was contained within 48 hours.
